AR Mill-Rolled plate

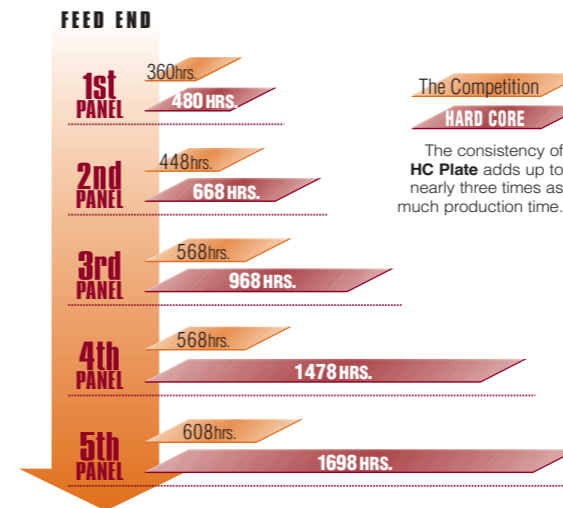

the solid alternative to heat treating

Competitive plate is mild steel that is heat treated to increase the hardness of the skin, producing a “soft core” and “soft spots” that never harden. This camouflage process is only as good as its softest spots. Only Buffalo Wire Works produces an alternative punch plate strong enough to stand up to the tough materials you’re screening – the revolutionary Hard Core™ Plate. This breakthrough in punch plate is made from an exclusive hot mill-rolled certified AR steel. The result is a consistent, uniform hardness right through to the core. And only Hard Core™ Plate has it.

All Punch Plate Is Not Created Equal

Getting the most cost-effective performance out of your screening machine over the long haul depends heavily upon selecting the right plate. Hard Core Plate is the only plate produced by a company specializing in the aggregate industry. Our competitors are perforators by trade, and choose to rely on heat treated steel rather than the quality mill-rolled plate we manufacture. The uniform consistency of our Hard Core Plate assures you of a much longer life cycle than heat treated plates. This extended life translates to some key benefits for you, including less down time for changeouts and lower cost per ton of screened material.

Why Single-Hole Punch Is a Knockout

Only single-hole punching provides the necessary tonnage to penetrate the consistent hardness of Hard Core Plate. In addition, this technique affords us faster set-up time and the ability to customize your plate in the exact pattern to fit your specific machine. Because competitive plates are perforated with 10 or 20 holes at a time, they can’t offer the same flexibility in customization. Our “direct link” CNC process produces error-free punch plate, reducing the time and hassles of nonconforming product.

There Are No Holes in Our Service

At Buffalo Wire Works, we provide you with quality service from beginning to end. First, we ensure that your specifications will be precisely met by preparing a CAD drawing of your custom design. This design is later downloaded directly to our CNC punch for production. Because our set-up time is minimal, we can turn around your order at least twice as fast as the competition. So you get your order on time, every time. Unlike our competitors, we can furnish you with your CAD drawing and a mill certificate to document your purchase. And our experienced customer service representatives are available at all times to help you get maximum effectiveness out of your Hard Core Plate.
