

ACT™ CONVEYOR TRAINING

Conveyor Product & Installation Training

TRAINING SEMINARS INCLUDE:

Conveyor fundamentals and Safety:

- Introduction and identifying components of a conveyor.
- Advanced fundamentals to a conveyor system
- Conveyor Safety

Increasing Conveyor Efficiency

- What is fugitive material and it's causes, effects and costs
- Problems created by carry-back, spillage and dust
- Conveyor belt tracking causes and cures
- Conveyor Laser Alignment
- Transfer point/load zone design
- How to prevent material spillage from the load zone
- Material wear liners-What, where and why

ASGCO® TRAINING CLASSES

The ASGCO® Conveyor Training Program (ACT™) offers classes created to provide your team with the highest quality training to solve your conveyor problems. Each day your team will spend classroom time discussing the most common conveyor problems such as mis-tracking, spillage and dust control. The remainder of the day is spent in our hands-on conveyor training room, installing components on a full size working conveyor. Our experienced staff will show your team the ease of installing and maintaining ASGCO® conveyor components.

“...Hands-on” is always better then “on-line.”

We can also develop the training course to meet your particular conveyor needs. And if you have a specific conveyor problem, we will teach you to discover the real issue, find out what others have done, brainstorm multiple solutions and implement the best one.

“...it is invaluable for my growth and I truly got a lot out of classes...”

ACT™ CONVEYOR TRAINING

SEMINARS AGENDA:

Day 1 Morning:

- Introduction and identifying components of a conveyor and safety.
- What a fugitive material and it's causes and associated problems.
- Problems created by carry-back, belt mis-tracking, spillage and dust, costs of fugitive material.

Day 1 Afternoon: In Conveyor Training Room

- Belt Cleaner, belt tracking and Safe-Guard® installation.

Day 2 Morning:

- Economics of material containment and control in and throughout the load zone.
- Solutions through design and equipment in the transfer point.
- Material wear liners: Where and Why?

Day 2 Afternoon: In Conveyor Training Room

- Skirting, load zone containment and wear liner product installations.

ASGCO®'S GOAL

The goal of our training program for everyone that attends is to learn one new / better technique / quicker / and safer way to solve everyday conveyor problems to help make their conveyor systems run more efficiently. The comments below say it all...

I can't thank you guys enough for your hospitality and the wealth of knowledge that you shared with me and my crew during our training at your facility. Yesterday when I got into the office I went out in the mill and just observed a couple conveyors. Everything really makes so much more sense when I applied what you taught me. I'm so much more confident in my crew and myself to applying the correct solutions to the problems I get asked to fix. The biggest issues I see are belt tracking heavy to one side or the other, the build-up of rollers, structural issues on the conveyors themselves and large piles of chip dust due to carry back. We are excited to apply what we have learned to this industry. In just 20 minutes of walking through I counted so many uses for your guard systems. I look forward to working with Andy and Lee in hopes of getting more of your products into this area. I'll be in touch.

K-Industries Inc.

Thanks for the training it is invaluable for my growth and I truly got a lot out of classes. This will be recommended for our employees in the future as we have increased revenue and need for more service techs in this area.

I gained knowledge in different ways to sell as well... Just saying give me your most troublesome belt and let us fix your issues. Sounds simple but I like it. I also see potential in the fact I do not see much ASGCO® in the field so I feel there is a place for your line in this area. ASGCO® has a very fresh approach and I was really shocked to see fab shop and order of facility. Matt was amazed as well and will be a hands on factor in helping Tip Top grow with ASGCO®.

I want to thank ASGCO® for the awesome training last week. Jeff, you did a great job and I learned a lot!! The hands on training with your products in the lab was the best manufactures training class I have been too. ASGCO® does a first class job with this class, and having Jeff provide history of the Allentown area was price less. I look forward to working with my customers on ASGCO® products and knowing I have a first class manufacture supporting me.
