

ASGCO® Safe-Guard® Return Idler Cages- Cost-Effective Solutions for a Safer Work Environment!

One of the most easily preventable conveyor accident sources is a dislodged return idler falling onto an unsuspecting worker. Misaligned belts often come into contact with return idler brackets, shearing them off and allowing the idler to break free. In addition to providing a multitude of solutions for proper belt tracking, ASGCO® has developed a simple solution for an additional measure of safety. The **ASGCO SAFE-GUARD® RETURN IDLER CAGE** is our latest innovative product to protect your workers with a cost effective, durable solution.

The **ASGCO® SAFE-GUARD® RETURN IDLER CAGE** is designed to catch the return idler from falling onto workers or equipment, preventing injuries and damage to critical components. The cage is built to last, made of durable powder coated A36 steel and requires no welding. The open design allows for fugitive material to pass through, preventing additional complications from build up.

It is easy to install and remove for belt maintenance using the quick mounting kit, which includes beam clamps, links and adjustable chains. The **SAFE-GUARD® RETURN IDLER CAGE** is available in various sizes to fit most belt conveyors and is OSHA/MSHA approved.

Protect your workers and equipment, and reach your safety compliance goals with the cost-effective **SAFE-GUARD® RETURN IDLER CAGE** from ASGCO®! Get more information now at www.ASGCO.com.
